MCC-WCS100

Features & Benefits/Applications

- An Engineered Tool for the High-Speed Cleaning of Fiber Optic Jumpers and Patch Cords in the Field
- Unique, High-Modulus Wipe Won't Shred or Lint, for Greatly Improved Cleaning
- Static-Dissipative Material
- Cleans Perfectly, At the Lowest Cost-per-Clean.
- The package is small and transportable, but very durable.
- The color-coded Sticklers™ CleanSlots™ tracks remind techs to never re-use a wipe, eliminating cross-contamination.
- The materials used in the package dissipates static charges so end-faces stay cleaner longer.

The Sticklers™ CleanWipes™ 400 cleaning device is a convenient, transportable fiber optic cleaning tool designed for the high-speed cleaning of fiber optic jumpers and patch cords out in the field. Its unique design enables technicians to clean fiber optic end-faces at the lowest possible cost-per-clean.

Everyone in the industry knows that if cleaning isn't fast and convenient, fiber optic installers simply won't clean, which adds maintenance and repair costs. The CleanWipes™ 400 system offers supervisors a simple, fast and disciplined cleaning process that delivers perfectly clean connectors and will easily be adopted by techs in the field. Better cleaning makes the network run faster and avoids expensive service calls that cost companies money.

The CleanWipes™ 400 tool has many special features, but first and foremost it is the design of the package that makes this product completely unique. This innovative engineering eliminates the chance of cleaning on already contaminated wipes, and minimizes fingertip contamination of the wipes. This design offers a huge improvement in the cleaning results and potential will result in enormous cost-savings to network operators.

Inside the CleanWipes™ 400 users will find an exclusive, static-dissipative, high-modulus fabric that will not tear or shred even when cleaning LC connectors. This highly absorbent material is very soft and will not scratch end-faces. This is the cleanest and best wiping material on the market today, so it's no surprise it delivers the best cleaning results.
