R-T-G?
RTG is the resistance from one point on the mat's surface to the mat's ground point, and is the fundamental electrical test for a mat. A proper Rtg insures that a mat can conduct charge from a point on the surface to the mat ground point. The guideline in ESD STM-4.1 for RTG is $1 \times 10^{6}$ to $1 \times 10^{9}$ ohms. ANSI/ESD S-20.20 has an upper limit of $<1$ $\times 10^{9}$ ohms.
RTT is the resistance from one point on the mat's surface to another point. A proper RTt insures the consistency of the mat's resistance properties. The ESD STM-4.1 guideline for RTT is $>1 \times 10^{6}$ ohms.
