

170-11 Micro-Shear® Flush Cutter

Introduction

This is Xuron's 170-II Micro-Shear flush cutter. Its blade by-pass, shearing cut was determined to be a unique feature of pure invention by the U.S. Patent Office and they awarded it Pat. #3774301. Its shear cutting action reduces cutting effort by approximately 50% as compared to conventional compression type wire cutters and produces a flat, flush cut. The advantage of reduced cutting effort is further enhanced by Xuron's ergonomically shaped, non-slip Xuro-Rubber™ grips, glare-eliminating black finish, and light weight. Its slim profile increases access in high density areas. Flush cuts soft wires up to 20 AWG (0.8 mm).

Features / Benefits

- Ergonomically Acceptable
- Reduces Operator Fatigue
- Rockwell Hardness: C54-56
