

New!

Model 9180ET Professional PE Scissors

Designed for scale modelers by a scale modeler!

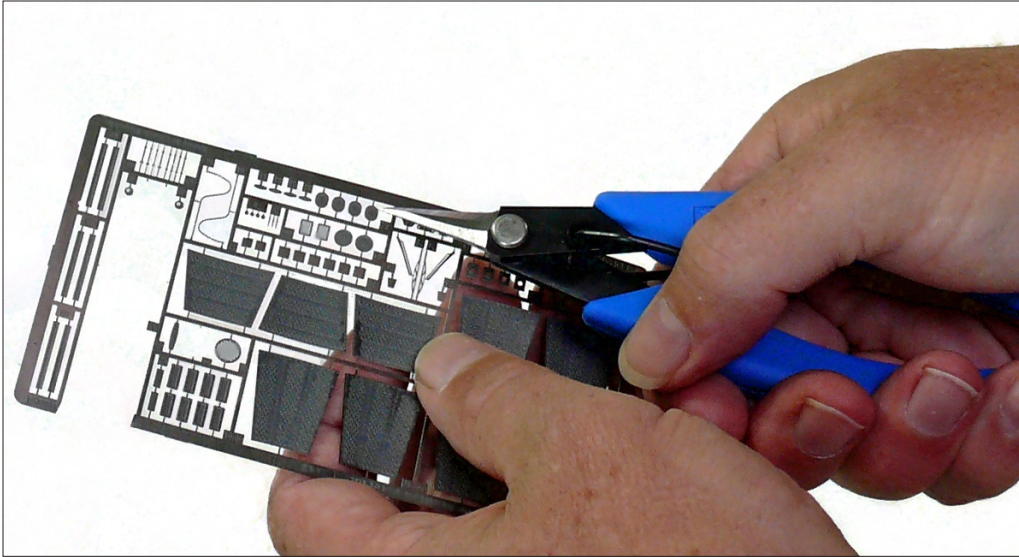

Photo-etched parts add realistic detail to scale models. Because these accessories are delicate and tightly spaced on metal frets, only a precision tool will safely remove them.

Introducing the new Xuron® Model 9180ET Professional PE Scissors – the solution for easy, safe, and damage-free removal of photo-etched parts.

If you work with photo-etched accessories, this tool belongs on your workbench. Here's why:

- ◆ Long, ultra-sharp tip easily nips off delicate, tightly spaced parts on PE fret.
- ◆ Large, curved ergonomic handle fits comfortably into your palm, giving you greater stability for precision cutting.
- ◆ Precision ground scissor blades create smooth, clean cuts with no effort and without pinching or twisting.
