

# ALPHA® OM-338-PT

Fine Feature, Zero Halogen, Pin-Testable Lead-Free Solder Paste

## DESCRIPTION

**ALPHA OM-338-PT** is a lead-free, no-clean solder paste designed for a broad range of applications. **ALPHA OM-338-PT's** broad processing window is designed to minimize transition concerns from tin/lead to lead free solder paste. This material is engineered to deliver the comparable performance to a tin lead process. **ALPHA OM-338-PT** yields excellent print capability performance across various board designs; particularly with ultra-fine feature repeatability (11 mil squares) and high "through-put" applications. **ALPHA OM-338-PT** is formulated to offer increased in-circuit pin test yields versus OM-338 without compromising electrical reliability.

Outstanding reflow process window delivers good soldering on CuOSP with excellent coalescence on a broad range of deposit sizes, excellent random solder ball resistance and mid-chip solder ball performance. **ALPHA OM-338-PT** is formulated to deliver excellent visual joint cosmetics. Additionally, **ALPHA OM-338-PT's** capability of IPC Class III for voiding and ROL0 IPC classifications ensures maximum long-term product reliability.

*\*Although the appearance of these lead-free alloys will be different to that of tin-lead, with mechanical reliability equal to or greater than with that of tin-lead or tin-lead-silver.*

## FEATURES & BENEFITS

## SAFETY

While the **ALPHA OM-338-PT** flux system is not considered toxic, its use in typical reflow will generate a small amount of reaction and decomposition vapors. These vapors should be adequately exhausted from the work area. Consult the SDS for all safety information ([www.AlphaAssembly.com](http://www.AlphaAssembly.com)).

**ALPHA OM-338-PT** should be stored in a refrigerator upon receipt at (1 to 10)°C, (34-50)°F. **ALPHA OM-338-PT** should be permitted to reach room temperature before unsealing its package prior to use (see handling procedures on page 3). This will prevent moisture condensation build up in the solder paste.

## APPLICATION

Formulated for both standard and fine pitch stencil printing, at print speeds of between 25mm/sec (1"/sec) and 150mm/sec (6"/sec), with stencil thickness of 0.100mm (0.004") to 0.150mm (0.006"), particularly when used in conjunction with **ALPHA Stencils**. Blade pressures should be 0.18-0.27 kg/cm of blade (1.0 -1.5 lbs/inch), depending upon the print speed. The higher the print speed employed, the higher the blade pressure that is required. The reflow process window will give high soldering yield with good cosmetics and minimized rework.

## PROCESSING GUIDELINES

STORAGE-HANDLING	PRINTING	REFLOW*	CLEANING
<ol style="list-style-type: none"> <li>1. Refrigerate to guarantee stability @ (1-10)°C, (32-50)°F</li> <li>2. Shelf life of refrigerated paste is 6 months from the manufacturing date.</li> <li>3. Paste can be stored for 2 weeks at room temperatures up to 25°C (77°F) prior to use.</li> <li>4. When refrigerated, warm-up of paste container to room temperature for up to 4 hrs. Paste must be ≥19°C (66°F) before processing. Verify paste temperature with a thermometer to ensure paste is at 19°C (66°F) or greater before setup.</li> <li>5. Do not remove worked paste from stencil and mix with unused paste in jar. This will alter rheology of unused paste.</li> <li>6. These are starting recommendations and all process settings should be reviewed independently.</li> <li>7. Temperature working range (on the stencil): 19°C – 32°C</li> </ol>	<p><b>STENCIL:</b> Recommend <b>ALPHA CUT</b> or <b>ALPHA FORM</b> stencils @ 0.100mm - 0.150 mm (4-6 mil) thick for 0.4 - 0.5 mm (0.016" or 0.020") pitch. Stencil design is subject to many process variables. Contact your local <b>ALPHA Stencil</b> site for advice.</p> <p><b>SQUEEGEE:</b> Metal (recommended)</p> <p><b>PASTE ROLL:</b> 1.5-2.0 cm diameter and make additions when roll reaches 1-cm (0.4") diameter (min). Max roll size will depend upon blade. "Exceeding the maximum diameter may cause curtaining (sticking to the squeegee when it is lifted from the stencil)."</p> <p><b>PRESSURE:</b> 0.5 – 0.7 kg/inch of blade length</p> <p><b>SPEED:</b> 25 - 150mm per second (1 - 8 inches per second).</p> <p>Release speed: within 3- 10 mm/s. Setting done under microscope. Poor release settings: results in icicles or missing paste in small apertures.</p>	<p><b>ATMOSPHERE:</b> Clean-dry air or nitrogen atmosphere.</p> <p><b>PROFILE (SAC Alloys):</b> Acceptable reflow / coalescence and IPC Class III voiding were obtained for the range of profiles depicted below.</p> <p>Note 2: Refer to component and board supplier data for thermal properties at elevated temperatures. Lower peak temperatures require longer TAL for improved joint cosmetics.</p>	<p><b>ALPHA OM-338-PT</b> residue is designed to remain on the board after reflow. If reflowed residue cleaning is required, <b>ALPHA BC-2200</b> aqueous cleaner is recommended. For solvent cleaning, agitation for 5 min in the following cleaners is recommended:</p> <ul style="list-style-type: none"> <li>- <b>ALPHA SM-110E</b></li> <li>- Kyzen Micronox MX2501</li> <li>- ATRON® AC 205 (ZESTRON)</li> </ul> <p>Misprints and stencil cleaning may be done with <b>ALPHA SM-110E, ALPHA SM-440, ALPHA BC-2200</b> and ZESTRON® SD 301 cleaners.</p>
