ALPHA® CVP-390

NO-CLEAN, LEAD-FREE SOLDER PASTE ZERO-HALOGEN, LOW VOIDS, FINE FEATURE, EXCELLENT PIN TEST PERFORMANCE, SAC305, SAC405, & LOW AG CAPABLE

APPLICATION

Formulated for both standard and fine pitch stencil printing, at print speeds of between 25mm/sec (1"/sec) and 150mm/sec (6"/sec), with stencil thickness of 0.100mm (0.004") to 0.150mm (0.006"), particularly when used in conjunction with ALPHA Stencils. Blade pressures should be 0.21-0.36 kg/cm of blade (1.25 -1.5 lbs/inch), depending upon the print speed. The higher the print speed employed, the higher the blade pressure that is required. The reflow process window will give high soldering yield with good cosmetics and minimized rework.

SAFETY

While the **ALPHA CVP-390** flux system is not considered toxic, its use in typical reflow will generate a small amount of reaction and decomposition vapors. These vapors should be adequately exhausted from the work area. Consult the SDS (available at www.AlphaAssembly.com) for all safety information.

STORAGE & HANDLING	PRINTING	REFLOW (see Fig. 1)	CLEANING
1. Refrigerate to guarantee stability @ 0-10°C (32-50°F). When stored under these conditions, the shelf life of CVP-390 is 6 months. 2. Paste can be stored for 4 weeks at room temperature up to 25°C(77°F) prior to use 3. When refrigerated, warm up paste container to room temperature for up to 4 hours. Paste must be 19°C (66°F) before processing. Verify paste temperature with a thermometer to ensure paste is at 19°C (66°F) or greater before set up of printer. 4. Paste can be manually stirred before use. A rotating/Centrifugal force mixing operation is not required. If a rotating/centrifugal force mixing is used, 30 - 60 seconds at 300 RPM is adequate. 5. Do not remove worked paste from stencil and mix with unused paste in jar. This will alter the rheology of unused paste. 6. These are starting recommendations and all process settings should be reviewed independently.	**STENCIL**: Recommend ALPHA CUT, ALPHA NICKEL-CUT, ALPHA TETRABOND®, or ALPHA FORM stencils @ 0.100mm - 0.150 mm (4-6 mil) thick for 0.4 - 0.5 mm (0.016" or 0.020") pitch. Stencil design is subject to many process variables. Contact your local Alpha stencil site for advice. **SQUEEGEE:** Metal (recommended) **PRESSURE:** 0.21 - 0.36 kg/cm of blade (1.25 -2.0 lbs/inch) **SPEED:** 25 – 150 mm per second (1 – 6 inches per second). **PASTE ROLL:** 1.5-2.0 cm diameter and make additions when roll reaches 1-cm (0.4") diameter (min). Max roll size will depend upon blade. **STENCIL RELEASE SPEED:** 1 – 5 mm/sec. **LIFT HEIGHT:** 8 – 14mm (0.31- 0.55")	**ATMOSPHERE**: Clean-dry air or nitrogen atmosphere. **PROFILE (SAC Alloys):** Straight Ramp: 0.7°C/sec & 1.3°C/sec ramp profiles, 45 - 90 TAL. **Soak**: 155–175 °C, 60 to 100 sec soak profiles have been determined to give optimal results. If required, good results are also achievable with high soak temperature profiles of 17 –185°C for 60 s. Typical peak temperature is 235 to 245°C. Note 1: Keeping the peak temperature below 241ºC may reduce the number and size of BGA and QFN voids. Note 2: Refer to component and board supplier data for thermal properties at elevated temperatures. Lower peak temperatures require longer TAL for improved joint cosmetics.	ALPHA CVP-390 residue is designed to remain on the board after reflow. If reflowed residue cleaning is required, Vigon® A201 (in line cleaning), Vigon A 250 (Batch Cleaning) or Vigon US (Ultrasonic Cleaning) are recommended. Vigon is a registered trademark of Zestron. Misprints and stencil cleaning may be done with IPA, ALPHA SM-110E, ALPHA SM-440, and Bioact® SC-10E cleaners. Bioact is a registered trademark of Petroferm.
