

wipers

ProCell™ Wipers

Nonwoven wiper designed for less critical areas where durability and sorption are key.

Features

- Triple layer construction of polypropylene / cellulose
 - Outer layer of polypropylene
 - Inner layer of cellulose
- High loft material
- Strong, puncture-resistant wipe
- Made in USA

Benefits

- Excellent sorption characteristics
- Feels like a traditional cloth material
- Absorbs equally well with water and oil based solutions or other viscous matter
- Excellent chemical resistance to both acids and bases

Texwipe's ProCell™ Wiper is constructed with a unique blend of polypropylene and cellulose to create a cloth-like wiper with superior sorption, durability and solvent compatibility.

Wiper Description

ProCell™ Wipers feature a cellulose-based, triple-layered material construction consisting of 35% polypropylene (wiper's outer layer) and 65% cellulose (inner layer). This unique combination was designed to deliver greater absorption and strength – the polypropylene outer layer provides strength and durability while the cellulose fibers on the inner layer rapidly absorb liquids.

Engineered with a highly absorbent core, these wipers quickly absorb water and oil and are compatible with both oil- and water-based solvents for a variety of heavy-duty, repeated-use cleaning applications. This triple-layered wiper construction enhances the durability of ProCell™ in wet and dry cleaning uses and gives the wiper a soft touch, feel reminiscent of cloth towels.

Applications

- Sensitive and Smooth Surfaces
- Oil-based Solvents
- Water-based Solvents
- Safe for all common work surfaces such as stainless steel, marble, granite, tile, and laminates
- Suitable for wiping food contact surfaces
